---

Hi Linda – Happy New Year!

I hear from our compliance engineers that your air monitoring network is up and running. Would you please point me toward the public website?

We are still quite interested in collecting some method-comparison samples at your Whiting location. Could we set up a site visit in early March to see the stations and consider the logistics of deploying passive tubes and canisters?

Thanks!

The earliest start date I can envision is March 2014. We should have everything up by then and be shaking the kinks out of the system. Does this help?

Hi Linda –

Could I trouble you for an approximate start date for our study? This could be the week that you plan to have your Auto-GCs running, any kinks worked out, and reporting to the public website. Or alternatively, if you are comfortable with this, we could collect a few preliminary Summa/tube samples even before the Auto-GCs are fully operational and not include the GC component until you give the go-ahead. What do you think?

I don't mean to press my luck with you on site access and scheduling! Please bear with me – depending on our projected start/finish dates there are two different pots of funding that I may be tapping into, so I'm just trying to get my request straight with the lab.

Please drop me a note or call when you have a moment (312-886-0267).

Thank you!  
Motria

Thank you Kosta. We have reviewed the proposal and are willing to assist you as outlined. When we get to that point, we will be interested in reviewing the results and the report.

Maybe when we get together next year for the CD update meeting, we can discuss this study in more detail.

Hi Linda,

Here is the write-up per our discussion with you. Thank you for your time and hope to hear back soon with your thoughts.

Thanks

Kosta
